

Workers are busy erecting electric poles (masts) on the elevated stretch of the ongoing metro rail project between Vadapalani and Koyambedu. As many as 40 poles have been erected across a length of 2,500 meters, where track laying was completed recently. Masts (or poles) of the 'flexible overhead catenary system' were shipped from Orissa to Chennai recently. Poles would be erected as soon as track laying ends on the rest of the length of the overhead corridor linking Koyambedu to St Thomas Mount.
